

Environmental Policy

Optimarin is founded to combat marine pollution. Optimarin Ballast System does not use or generate chemicals in its processes.

It is Optimarin's policy to sort and recycle as much used material as possible using an approved or recognised receiver and to encourage our suppliers to do the same.

Optimarin manages and monitors all the company's activities which may have an influence on the external environment and aims to reduce the impact we may have on the external environment.

Furthermore, it is Optimarin's policy that all work performed shall meet legislative and contractual environmental requirements. To ensure that these requirements are met, Optimarin has introduced an applicable environmental control system, which is well documented.

A comprehensive introduction and overview of the basis environment management system will be given to all employees, to ensure that they fully understand the environmental management system and the internal and external obligations. The management and employees are required to follow and conform with the environmental control system at all times, to ensure that the environmental requirements are achieved in everything that we do.

Continuous improvement of the Environmental Management System is a priority in order to enhance environmental performance.

Stavanger, 6th January 2017

Tore Andersen
CEO
